Policy of the disclosure of H08

In addition to the Terms and Conditions of H08, which is a legal document shown elsewhere, I would like to clarify my intention and policy for the disclosure of H08.

The disclosure of H08 is based on my conscience and belief as a scientist. I wish that H08 is utilized by users with flexible ideas, and that it contributes to the advancement of hydrological and environmental sciences.

In the most extreme terms, H08 is a mere translation of the existing knowledge of hydrological sciences into Fortran language. However, it required considerable time and effort to realize it, making it possible to apply it to today's global environmental problems. I would be pleased if the disclosure of H08 saved the time and labor of the users.

For the above mentioned purposes, I believe that giving unlimited freedom and rights to the users should be avoided. For example, it would impede the advancement of science if I allowed someone to claim that H08 is his/her own model without any modifications or with only minor additions. Such an act would benefit neither the users nor the citizens.

I edited the Terms and Conditions with intensive studies and discussions with specialists in order to exclude any usage that potentially confuses the users and citizens and impede the advancement of science, and to help maintain the flexibility of users.

I continue to work on this effort. As shown in Article 5.1, the Terms and Conditions are subject to change in order to realize the policy stated here. Your understanding and support is highly appreciated.
